

TZB-100E

I don't know the age of Tappansee Bridge. But I am regularly crossing the bridge every day. If we have money, we could build a new bridge. But if we have money, we can not replace a life. We are paying tolls when we pass the bridge. So your safety is important in your hands. If it is a new bridge, we don't have to worry about the safety when we cross the bridge. If we give more weight on the bridge, I don't think it can hold it. Latest bridge accidents pour light on this issue. Only alternative is the replacement of the bridge with a new one.
