

TZB-074E

The tappan zee bridge definately needs to be replaced. Weather we should build a tunnel, I'm not sure how that would really impact the River, however we should be replacing the bridge not repairing a 52 year old structure and the train is an excellent idea as well. I donot support busses going back and forth we should just put the rail system in via a rail bridge or if absolutely necessary the tunnel for it. It does not make sense to put a band aid on this issue. The traffic is a reality and it will only increase in years to come. This is a necessity and a reality.
