

TZB-033E

It is absolutely necessary that a new bridge be built. It should have a light rail that would help connect east and west and north and south. This should have happened years ago. When have you ever heard of a lane being moved twice a day and still had no plans to replace a bridge that was already insufficient to handle all the traffic. Most people do not like traveling by bus. If there were any problems with traffic it would probably be affected also. We should plan for the future. It will be less expensive in the long run. If we had done something years ago we would have saved a fortune. New York state needs to update its infrastructure .

thank you
