Mr Anderson:

I believe the costs and construction of a train through Rockland should not be considered

It has already been noted that there is no one seat ride to Manhattan from Rockland County.

Construction of train stations and rail lines will change not only the face of Rockland county but there will be a total disruption of our quality of life as well.

This would be due not only to the the raising and widening of at least 20 thruway overpasses from the bridge to Hemion Road, but also to the widening of the thruway , blasting and eminent domain of homes, properties and closing many side roads which have nothing at this time to do with the thruway..

Rocklanders,as you know already have the choice of two trains going to Manhattan. Three if you take the bus across the bridge to Tarrytown.

Having attended all the monthly meetings I am of the opinion that the bridge needs to be replaced. However the fact that the process will again destroy the Town of Nyack is quite disturbing.

Noone has even noted how long the whole process will take nor where the traffic will go during this process.

Yours truly,

Joan Schroeder
