

TZB-152E

Dear Sir/Madam:

I am a thirty year resident of Rockland County. While traveling across the TZ Bridge on Sunday, March 30, I went over several metal plates and much rough surface. The safety of this bridge is seriously starting to concern me. I believe that it is time to end the talking, make a decision, and begin replacing this bridge before we experience some avoidable calamity.

I am in favor of a new bridge with a rail component. I feel that this would be the most future oriented and ecologically sound solution to our regional transportation issues.
