I will be attending the 10/28 meeting at 7:30 and would like the following questions addressed. Thank you.

1. Do you have map which illustrates the placement of the new bridge and it's entrance point into Tarrytown (hereafter "TT")? 01
2. Where is the proposed train link for Rockland to NYC going to be placed in TT. 02
3. What steps are going to be used to abate the noise from the new bridge. 03
4. What steps are going to be used to abate the pollution from the bridge traffic in TT and Rockland. 04
5. Why is the new bridge being built north of the existing bridge and not south? 05
6. If the bridge is north, will the entrance onto the Tarrytown side remain where it is or will that be moved north as well? 06
7. The existing bridge forms an "S" shape, will that remain? 07
8. Will the existing toll plaza remain? 08
9. What private or public property will be effected in building on the TT side as it pertains to:

a. The new bridge P-026

- b. The light rail
- c. The Rockland Westchester bus link
- d. Reconfiguring of the entrance and exit ramp.
